DESCRIPTORS: *Petroleum, Recovery, Water
Injection, Air, Pressure,

In a discussion of the air-repressuring and water-
flooding methods tried out, it is stated that in one of the
cases the oxygen content of the injected air was almost
completely absorbed by the oil in the strata. Displace-
ment of oil from a producing stratum by alkaline water
is 13% greater than by hard water, e.g., sea water.
The latter should be used only for flooding strata which
contain hard water, to avoid plugging of the pores by
precipitation upon mixing the different waters. (Author)

The pressure telemetering system described here is a self-compensating mechanism which represents the magnitude of the measured pressure by means of an inductive transducer with a mixed magnetic field. The (Engineering--Electronic, TT, v. 8, no. 3) (over)

The alluvial ores of Western Siberian deposits contain leucoxene, ilmenite, rutile and zircon. The overall content of titanium dioxide in the sample was 3.4%, and zirconium dioxide 1.2%. In grain characteristics the sand is exceptionally fine, slightly kaolinised material, in which the valuable minerals are distributed extremely unevenly. Almost all the zircon is concentrated in the 0.074 - 0.30 mm size fraction, while the titanium minerals are found in the size range 0.3 - 0.030 mm. Preliminary dressing may be by either flotation or gravity. Finishing operations may be carried out by (Metallurgy, TT, v. 5, no. 7) (over)
